

STUDENT HEALTH PROGRAM

The Student Health Program was developed through a partnership among six school divisions, Child and Family Services, Alberta Mental Health Board and the Mistahia Health Region, to provide coordinated service to students who are considered to be within the mild/moderate range of severity.

This program serves two major areas:

1. Rehab services including speech/Language, Occupational Therapy and Physiotherapy.
2. Mental health services.

Goals:

1. Provide identification, assessment and program delivery services for students within the mild/moderate range of severity. This service will be provided above the services that were previously available to these students.
 2. To assist students and parents adjust and/or fit into the education system better.
 3. Reduce stress on parents to find appropriate services with all community agencies.
 4. Review the effectiveness of the services to determine what services will continue to be provided in the future. Yearly surveys conducted by Rehab and Mental Health will determine success. Programs will be adjusted as needed.
